

1 ABSTRACT OF THE DISCLOSURE

2 The present invention relates to an improved method for securing
3 a computer connected to an insecure network when the computer is not
4 utilizing the insecure network, wherein the computer is installed with a
5 program managing the connection with the insecure network, which includes
6 the steps of determining whether the computer is active, deactivating the
7 computer from the insecure network when it is determined that the computer is
8 inactive, and waiting for a predefined time period to repeat the method.
